

A every certified complete plan of «near-ground»: 283 plans over 11 event hypotheses

B best plan of each event hypothesis: which term moves with the event time

C the ten lowest- J_{global} plans of the run

■ T execution time
 ■ L route length
 ■ Q joint-limit reserve
 ■ V velocity utilization
■ E effort
 ■ C clearance reserve
 ■ K conditioning reserve
 ■ schedule term ($J_{global} - J_{motion}$)

$J_{motion} = w_{TT} + w_{EE} + w_{LL} + w_{CC} + w_{QQ} + w_{KK} + w_{VV}$ (weights frozen, docs/mathematics.md §7); $J_{global} = J_{motion} + \text{schedule term}$. Terms as logged by the controller for each certified plan.
